Phase 8: Project Demonstration

Execution & UI Evidence

Role	Name
Team Lead	Anuhya Priya
Member 1	Dronadula Sai Chaitravi
Member 2	Srinu Buridi
Member 3	Andagundala Bhavana
Member 4	Naga Venkata Reddy Bethireddy

Terminal Execution

The following screenshot demonstrates the successful initialization of the OptiCrop Flask development server, indicating the application is ready to accept HTTP requests on local port 5000.

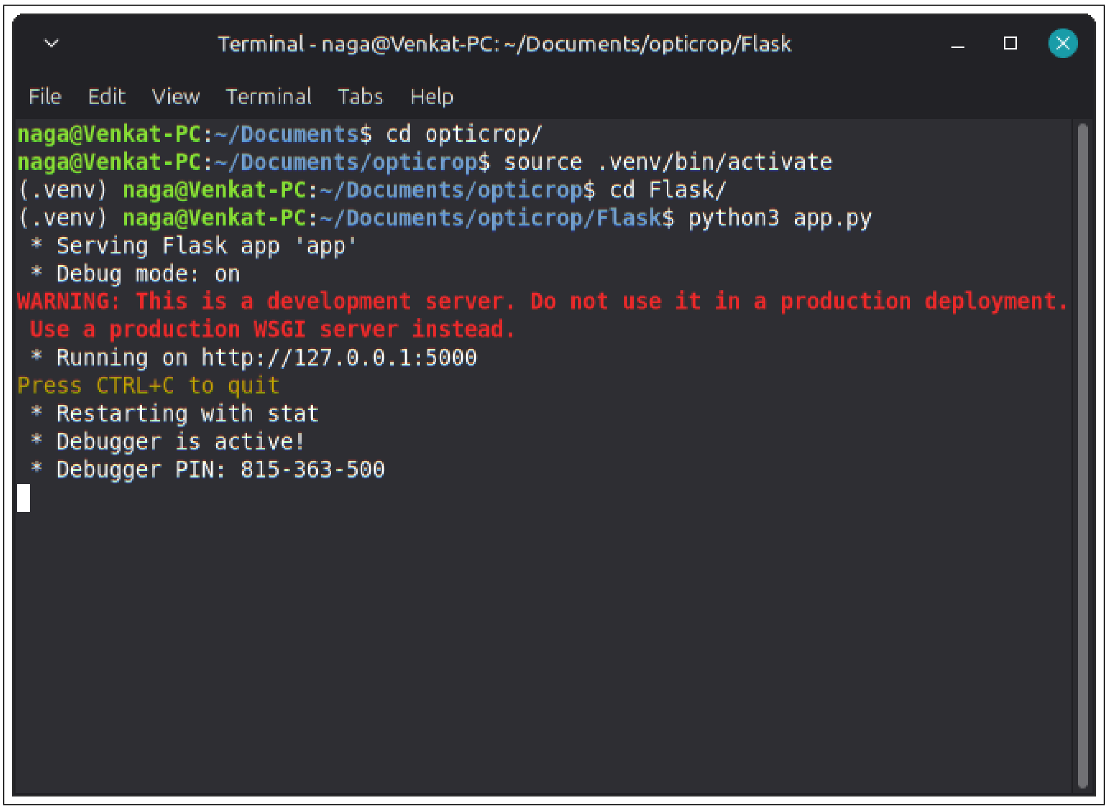

Figure 1: OptiCrop Flask Server Running in Terminal

Web Interface - Home Page

This screenshot displays the landing page of the OptiCrop application. It outlines the project's purpose regarding smart agricultural optimization, the technology stack utilized, and features the call-to-action button to navigate to the prediction form.

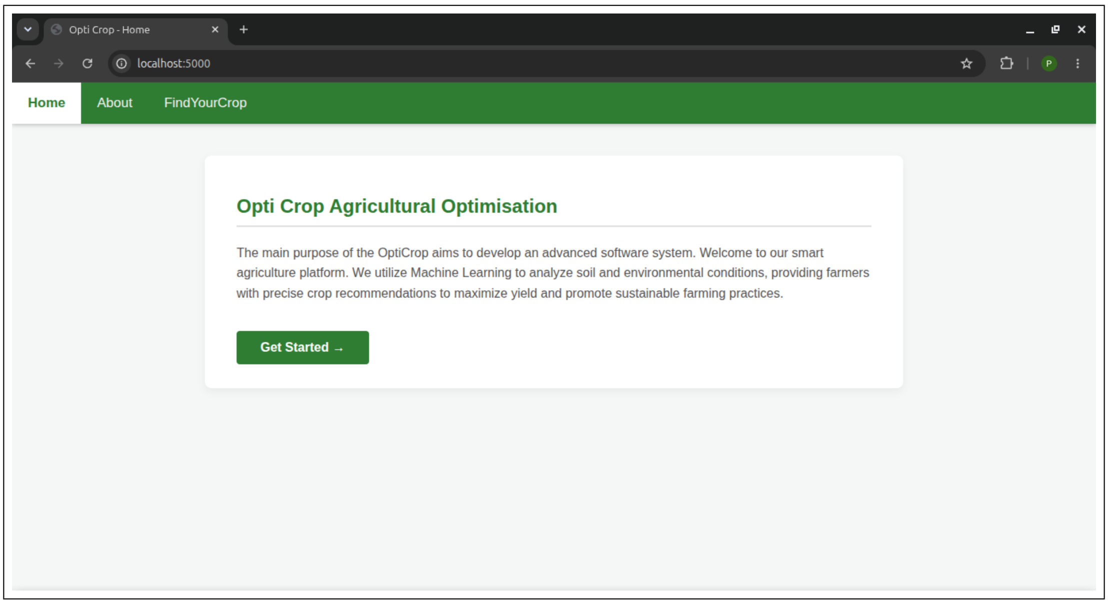

Figure 2: Landing / Home Page Interface

Web Interface - Form Input

This screenshot displays the user filling out the "Find Your Crop" form with the 7 required agricultural parameters: Nitrogen, Phosphorous, Potassium, Temperature, Humidity, pH, and Rainfall.

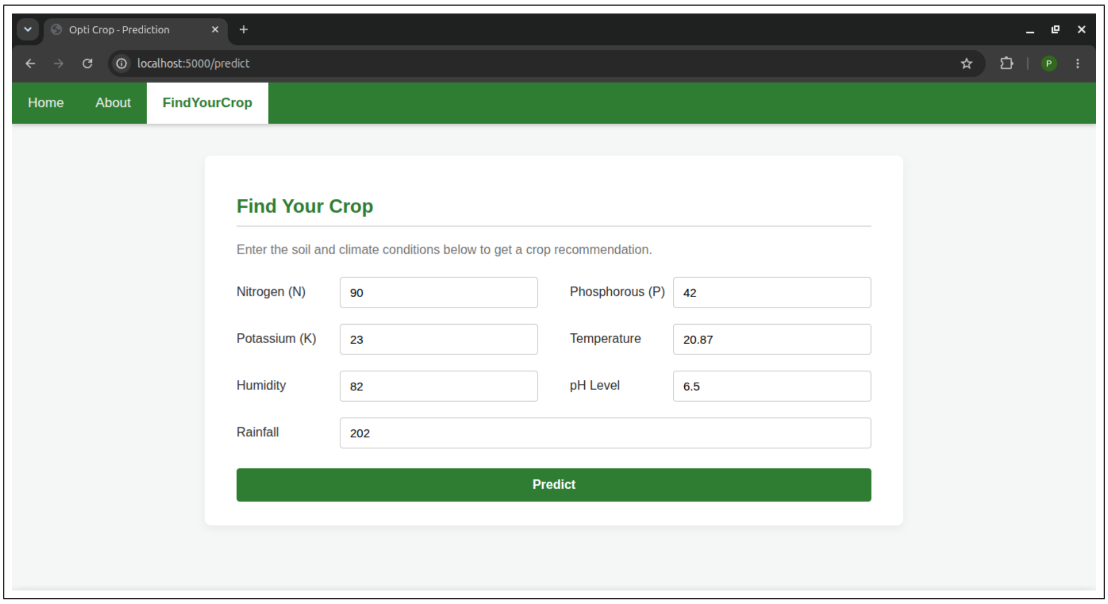

Figure 3: Crop Prediction Input Form Interface

Web Interface - Output Result

This screenshot exhibits the system successfully processing the input, applying the Standard Scaler, and rendering the Logistic Regression model's prediction. The recommended crop is displayed clearly in the dynamic green result box.
